

THE VOTERS' LIST

In view of the criticism leveled at the Town Council and town officials, before and since the last election on February 16, regarding omission of names from the voters' list, the following letter by J. Fitzallen, appearing in the February issue of The Municipal News, goes a long way toward clarifying the situation, and absolves the local council and officials from blame for the unsatisfactory compilation of the last voters' list.

Our readers will note that the Special Committee, appointed to draft a revision of the Town and Village Act, also repudiates responsibility for a great deal that found its way into the Act before the final passage—Ed.

U.A.M. Special Committee and Town and Village Act
"Considerable responsibility, in respect to the provisions of the Town and Village Act 1934, rests on the shoulders of the Special Committee of the Union of Alberta Municipalities, which was appointed at the request of the then Deputy Minister to co-operate in the revision of the Act theretofore in effect. The Committee itself prepared a draft designed to meet the needs of the municipalities and as a result of a considerable portion of the present Act is in the exact verbiage and phrasing of the Committee's draft, and so far as the Committee knows, not a single section so prepared by the Committee and translated into legislation, has anyone called into question by anyone. But the Committee does disclaim all responsibility for other parts which found their way into the Act before its final passage. Certain of these provisions, however, are impracticable and in others outright objectionable, have been made right by subsequent amendments. Others have not."

"For instance, in respect to the qualifications of a voter in town elections, Subsection 3 of Section 188 makes no provision for the inclusion on a Voters' List of the name of the relative of a tenant who has applied for inclusion. Obviously, his name cannot be included and, consequently, he cannot vote. Nevertheless, Section 188, although not clearly expressed, does appear to confer on him that right. Consequently, many secreted voters, themselves in a dilemma when faced with the demand that such names be included. Quite obviously they had no option but to refuse. Reference to the Department brought the advice that relatives of tenants might be included by the Court of Revision provided the applicants took the affidavit in form 'H'. This, however, does not suffice, as the affidavit is not sufficiently wide in its scope to be submitted by one other than an assessed person, the relative of an assessed person, or a tenant."

"Then again the question arises as to just what is a 'tenant who has rented an assessed parcel?' Does this mean that the renter must rent an assessed parcel? It appears to. If so, obviously the renter of a shack, be the renter ever so small, providing it occupies a single lot, is entitled to vote. On the other hand, the occupant of an expensive suite is debarré. A reference to the Attorney-General's Department in this connection brought the opinion that even in the case of a double house, occupied by two separate families, neither could vote."

"Apparently, the author of this portion of the Act seemed to recognize, to some hazy extent, the principle that only one vote should be cast in respect to any one parcel. But why then permit any tenant to vote at all? Another anomaly which appears to have its roots embedded in a hazy conception of the same sound principle is this: where there is an owner-tenant, the owner is assessed, either, but not both, may vote. But if there happens to be a number of joint owners, all may vote, and likewise, a number of joint purchasers may qualify. And if the joint owners have a single tenant they all vote or if the joint purchasers have a single tenant they all vote, providing the joint owners haven't got to the polls ahead of them."

Voters' List
"Part VI of the Town and Village Act is a mess. It should be wiped (Continued on Page Five)"

PROMINENT MEN ATTEND OPENING
Eight Edmonton business men visited Lacombe Thursday for the official opening of the new Central Alberta Sales Pavilion, and were very favorably impressed with the splendid building and the facilities it offers. Those making the trip were John McMullen, John Blue, J. L. Paley, George and George Staples, representing Edmonton Chamber of Commerce and C.P.R.; Dean Howes, University of Alberta; G. G. Carlyle, provincial government, and Percy W. Abbott, K.C., and Fred Kemp on behalf of the Edmonton Exhibition Association.

NARROW ESCAPE IN TRUCK MISHAP
CLIVE, March 10.—R. Harris, trucker, narrowly escaped when he stepped from his truck as it skidded on an ice-surfaced road, plunged over a ledge and fell 150 feet. The machine was damaged badly.

Clive

Mrs. A. Boston is spending a few days in Edmonton.

The many friends of Master Harry Foster are pleased to know he is doing so well at Lacombe Hospital after his serious operation.

A number of farmers from Clive district took horses to Lacombe Horse Sale March 11.

Mr. G. Conrad and family have moved into the Red Deer Hotel building. Mr. Conrad has taken up the Case Machine agency.

Rev. Mondy of Red Deer held service at the Baptist Church on Sunday afternoon.

Mr. and Mrs. Ed. Westling and daughter have returned home after spending the winter in California.

Harold Northcott of Ponoka died at Lacombe Hospital March 7. He leaves to mourn his loss his wife and two children, also his mother, Mrs. J. Northcott of Clive, and three sisters and four brothers. His father, H. J. Northcott, predeceased him less than three weeks ago. They many friends are sorry to hear of his passing.

Mrs. Ora Dilts is able to be out again after a severe pneumonia. Several cases of scarlet fever are being shipped from Clive.

The Dramatic Society held a successful dance in the hall on Friday evening.

GOLDEN JUBILEE OF VANCOUVER

MAY 24-SEPT. 7

VANCOUVER, B.C., Feb. 26.—This year will be an important one in the history of Vancouver when it celebrates its Golden Jubilee during the period from May 24 to September 7 inclusive and it is expected that many thousands of persons will take advantage of the festive period provided by this occasion to make a visit to the sunny slopes of the Pacific, according to C. W. Johnston, general passenger agent of the Canadian National Railways.

Tours from Eastern Canada to the Pacific Coast this summer by the Canadian National Railways provide passengers with attractive optional routes, arranged to give a wide variety of scenery and diversity of interests, stated Mr. Johnston. "En route to the Pacific, a stay may be made at the summer mountain resort of Jasper Park Lodge, situated in Jasper National Park, Alberta, the largest national park in the world. From Jasper, the coast may be reached by either of two interesting routes, directly to Vancouver down the Thompson Fraser Valley, or by going straight through to Prince Rupert via the valley of the Skeena River and thence by boat to Vancouver down the coast of the closed waters of the 'Inside Passage.'"

Vancouver, Canada's great gateway to the Pacific, offers this summer a program of events during the Golden Jubilee period of surpassing interest to every tourist and visitor," stated Mr. Johnston. "In addition to which is a wonderful climate and beautiful scenic attractions."

Successful Recital Held In I.O.O.F. Hall
On Wednesday evening, March 4, a piano recital was presented in the I.O.O.F. Hall by Miss Evelyn Moseley, A.T.C.M., of Red Deer, and her pupils, assisted by Professor W. W. Fink, tenor, of Red Deer, and Charles Norman, entertainer, of Olds.

The program opened with a number of piano solos and duets by Miss Moseley's young pupils—Marjorie Ellis, Patricia George, Evelyn Breck, and Chalk. Robert Prescott, Freddy George, and John Jones, and Lawrence Proudfoot, some of whom showed real style and promise in their playing.

Prof. Fink rendered a group of three songs which delighted the audience and called for an encore.

On the first part of the program the charming little pantomime, "Derella," was presented by various pupils. Mrs. Charles Norman amused his audience with a description of an English small-town charity concert, which brought down the house.

Mrs. Fink gave a sacred selection, "Great Is the Holy One of Israel" (Casse) in splendid style, with a simple, good melody, "Sweet Home," as a well merited encore.

Miss Moseley aided the program with several splendid renditions from well-known masterpieces.

PEDIGREE CERTIFICATES
The pedigree certificates by the National Live Stock Records, approved by the Dominion Minister of Agriculture for the month of January, 1936, amounted to 10,029, including 416 for horses; 4979 cattle; 1366 sheep; 686 swine; 526 goats; 624 dogs; 1396 poultry and 12 goats.

By T. R. WINDROSS PREMIER ABERHART FULLY CAPABLE OF PUTTING SOCIAL CREDIT INTO OPERATION WITHOUT HIS ASSISTANCE.

EDMONTON, Alta.—The past week was one of hectic interest and witnessed one or two of the most significant happenings during the present session of the legislature in Alberta.

In the first place, the long expected Social Credit enabling bill was introduced in the House by Premier William Aberhart. It was not the controversial instrument it had been expected to be, being in its general principle simply the authority for making a complete study of Social Credit, to employ experts to advise on the system and the instituting of it, and it contained no powers which are not at present in the possession of the government through the medium of the public accounts and agriculture committees. It will be remembered that the U.F.A. government during the last session invited Major C. H. Douglas to come to Alberta and act as special reconstruction adviser with a view to finding a suitable plan of Social Credit for the province. The new bill only gives the legislature or government power to do the same thing.

Discussion on the principle of the bill will take place when it comes up for second reading and on its details during its passage through committee. Opposition members are likely to point out that in their opinion, the measure is only a gesture to the government's supporters. Of course, the real intent and powers of the Social Credit bill will not be fully known until the government has had a chance to explain on these features, and it is not to be supposed Premier Aberhart and his advisers have taken any more empty gesture as a step in the direction of implementing the government's main aim and promise. It will be wisdom to await the full revelation of the cabinet's plans before expressing any judgment as final.

The legislature and the city were thrown into ferment on Thursday when an Edmonton newspaper published an exclusive story from London, giving details of Major C. H. Douglas's ultimatum to Premier Aberhart and his cabinet as to the conditions on which he would consent to continue his work as reconstruction adviser to the government. These conditions were:

1. Cancellation of new taxation announced in last Monday's budget.
2. Substitution of an interim budget on last year's basis.
3. Rejection of the Dominion provincial loan council plan.

A caucus of Social Credit members was called for Thursday night to consider a reply to Major Douglas, but before it could meet, and after the Premier Aberhart had opportunity to lay the Douglas terms before his supporters in the legislature, the London economist announced his terms in London, a breach of courtesy on the part of any expert engaged by a government that must put him in a rather bad light.

There is a strong tide of sympathy for Premier Aberhart setting in because of Major Douglas' insubordinate attitude and actions during the past week. It looks like several things not creditable to the Major. Either he is afraid of putting his theories to the test in Alberta, for reasons that do not seem clear, or else he is jealous of the fact that another than himself has got the world's attention in connection with those theories. One thing is certain—Social Credit is practicable. Premier Aberhart is fully capable of putting it into operation in Alberta, and Major Douglas is not. (Continued on Page Five)

APPOINTED DISTRIBUTOR FOR LAKE OF WOODS MILLING CO.
Mr. McNeice has been appointed Distributor for Five Bros Products in Lacombe and district. Having been a distributor for the distributor for first-class patent flour in the district, Mr. McNeice accepted the appointment and will now be in position to meet the demand for a first patent flour in addition to supplying his own brand, "Pioneer Flour," to his many satisfied customers. A car of flour and grain is being shipped in and should arrive within a week. Our "ad" appears.

Is Postponed
Owing to the meeting proposed Packing Plant called for Saturday afternoon in the Pavilion being of more wide spread interest in this locality, the executive of the local Soldier Settlers' Union have decided not to hold their meeting in the Town Hall at the same time. They urge every soldier and Empire settler to get in touch with their officers. Urgent business needs attention.

LACOMBE'S NEW SALES PAVILION

ANNUAL REPORT OF LACOMBE PUBLIC LIBRARY

The following is the annual report for the Lacombe Public Library, for the year ending January 31, 1936:

Number of borrowers, 293; open-shelf books loaned 12,208; pay books loaned 635—total 12,843.

Books purchased: Fiction, 99; non-fiction, 41; juvenile, 91—total 330.

Books in the library: Fiction, 1424; non-fiction, 195; juvenile, 298—total 1917.

Revenue
Members' fees \$ 73.25
Pay book revenue 62.00
Extra book revenue 21.25
Fines 51.10

Government grant \$207.50
Total \$342.21

Books purchased \$407.40
The Town Council provides the library room free of rent, also light and fuel. The members of the L.O.F.E. give their services to act as librarians, so there is not any cost for running expenses, and all money taken in at the library is spent for the purchase of new books.

FAIRVIEW
The bean supper postponed from Feb. 25 is to be held this Friday, March 13, at 6 p.m. in the church. Come one, come all.

Opening of New Pavilion
Attracts Large Gathering

ARTISTS FROM ALL POINTS OF PROVINCE CONTRIBUTE TO AGATE EVENING.

Over 1400 visitors from Lacombe and district greeted Superintendent T. B. Reed when he delivered his address of welcome at the opening of the new Central Alberta Sales Pavilion at the Experimental Station, Lacombe, last Thursday.

In an interesting talk, Mr. Reed explained how the proposal for the new building first came to be discussed, and gave credit to the various organizations and members of the government who had so heartily co-operated in finally bringing the fine building to completion. He also paid tribute to Bert Newman, the local contractor, who had given willingly of his time to rush the building to completion.

The new building was ablaze with light and gaily festooned, with a splendid platform erected at the west end for the performers and artists who contributed to a program of entertainment that surpassed anything of like nature put on before in Lacombe.

During the first part of the program the crowd was larger than anticipated, and many were compelled to stand, filling the aisles.

Among those contributing to the following towns: Edmonton, tap dance, Mary; acrobatic dance, Baby-Jane; grass skirt dance and Maori, Rex; acrobatic dance, Jackie Ireland; tap dance, "Hot Time in the Old Town," "Ma Lady Lay," "Song of the Levee," "Hullylum in My Bones."

"We Have No Bananas," Stettler, baritone solo, H. E. Seale. Rimbey, soprano solo, Mrs. Alter (accompanist, Mrs. Kennedy). Canoeing, baritone solo, Constable Broadway, Bentley, one-act farce, "Packing Up," in Lacombe.

Frank Thorpe and his Bentley Stars, Wetaskiwin, dance, Jean and Robert in Lacombe. Louise Todd, Harry Ford, George England and Gordon Scott, "Peasants," "Grip Gag," "Vacuum Gag," dance, eight girls from Red Deer, "The Old Town," "Ma Lady Lay," "Song of the Levee," "Hullylum in My Bones."

"We Have No Bananas," Stettler, baritone solo, H. E. Seale. Rimbey, soprano solo, Mrs. Alter (accompanist, Mrs. Kennedy). Canoeing, baritone solo, Constable Broadway, Bentley, one-act farce, "Packing Up," in Lacombe.

Frank Thorpe and his Bentley Stars, Wetaskiwin, dance, Jean and Robert in Lacombe. Louise Todd, Harry Ford, George England and Gordon Scott, "Peasants," "Grip Gag," "Vacuum Gag," dance, eight girls from Red Deer, "The Old Town," "Ma Lady Lay," "Song of the Levee," "Hullylum in My Bones."

High River Debating Team Provincial Champions

Sydney Lidsted and Ernest Tyson of Staveland, debating team of the High River Presbytery, won the Provincial Championship of the Young People's Union of the United Church of Alberta when they met in debate on Saturday evening, Roger Thompson and Don McFadden of Lacombe.

The subject of the debate was: "Resolved that Great Britain's position in the Italian-Ethiopian crisis is predominantly motivated by economic and national interests."

This debate was the culmination of the work being carried on by the Young People's Unions of the Presbyteries during the year. The judges were Bill Pettigrew of Calgary, Bill Harper of Claresholm and J. S. McGormick of Lacombe. Mr. McGormick, president of the Alberta Conference of Young People's Unions, presented the winners with the Hibbert Shield and they will also be recipients of individual medals. The Staveland Young People took the affirmative, while Lacombe team upheld the negative. Peter Anderson officiated as chairman.

Safeguarding Democracy

"If our democracy is to survive, the whole voting public must be educated, so as to use the rational, scientific mode of approach to all our problems, instead of the emotional, superstitious and 'hunch' mode of approach."

When Dr. Robert Millikin, eminent American physicist and scientist, made this statement recently in a letter read at a congress of the American Institute in New York, he said a great deal in a few words, and while, no doubt, he had social and economic problems as they exist in the United States in mind nevertheless the philosophy contained in his words is equally sound and applicable when considered in the light of the problems and conditions which confront the people of this country.

For no matter what problems exist, and without any limitation of their geographic or ethnologic application, it is axiomatic that they cannot be solved satisfactorily unless the ray of clear reason and logic is focused upon them rather than a diffused floodlight of passion and emotion. In other words, it is only after the problems which cry aloud for solution have been placed under the microscope and subjected to scientific analysis to determine what they are made of, that it is possible to prescribe an effective cure.

If, on the other hand, people allow their emotions to run away with sober reflection and sound judgment, no matter how laudable those emotions may be, no matter how fine even the impelling motives, it is a safe assumption that the conclusion reached will nine times out of ten be wrong and the goal to be achieved further removed and subsequently more difficult to attain. For misdirected effort surely leads to more complicated and most undesirable consequences.

In their turn undesirable consequences can do nothing but promote unrest, dissatisfaction and despair, and when these moods have been induced people are apt to turn to anything that offers in the hope of finding relief, even to the extent of surrendering liberties which have been bought at great cost.

All this, no doubt, Dr. Millikin had back of his mind when he wrote his dictum that the existence of democracy is threatened for the peoples who fail to apply science and reason to the solution of their problems.

This does not by any means contradict the assertion that sentiment and emotion have their part in determining the destinies of individuals and nations. Indeed, not only have they a part to play, but without these forces the world would be a sorry sphere, but they require as a governor, rational thinking and logical decisions, so that they may be directed along right and useful channels.

Once rationalism has pointed the way to the solution of the problems which vex the soul, then is the time to call into play the finer emotions of burning zeal and enthusiasm to kindle others, and it is a safe assumption that causes lighted from the beacon of incontrovertible fact and entrenched wisdom are those which will ultimately prevail in the minds and hearts of the multitude.

The people of Western Canada have at times been accused of being too easily swayed by popular and ephemeral concepts and of swinging to extremes. If there is any truth to that, it is equally true that the peoples of other lands are not more prone to do so than the peoples of other lands. For proof, it is only necessary to take note of what is happening in other countries.

Moreover, if at times, the citizens of this country, display an occasional tendency to soar to impractical heights, as they do in other countries it is noticeable that free ventilation and discussion eventually slow down the pendulum to a point where questions can be considered rationally, as a tribute to the value of free thought and free speech, rightly regarded as the bulwarks of democracy.

And in this connection it is interesting to note that Dr. Millikin also stated that he regarded the newspapers as "on the whole the most effective adult educational influence in this country," coupling this with his comment on the necessity of resorting to reason if democracy is to survive.

This statement needs very little amplification, for it is universally recognized that the newspapers of this country devote a great deal of space to the publication of discussions by authorities and others on important social and economic problems and also to announcements of discoveries of value to mankind generally.

A Rare Operation

Blood Sponged From Patient's Lung Used For Transfusion

A rare operation in which the victim of a stab wound in the heart was saved by his own blood was reported in the Journal of the American Medical Association. The blood was sponged from the victim's lung cavity, and was then injected into his veins in a manner similar to the usual transfusion. Two Pittsburgh physicians, who described the case for the Journal—Dr. Charles M. Watson and Dr. James R. Watson—said it was the first of its kind in medical annals.

Building Fine Dock

Shanghai will be able to boast of one of the finest docks in the world when the new \$2,500,000 wharf below Point Island just outside the harbor area proper, is completed. The project, which is being backed by the government-owned Central Bank of China as a private enterprise, will have dock frontage of 2,500 feet.

Cyclist messengers of the British postoffice cover 200,000 miles annually, with a total of 20,000 bicycles.

Production of rayon in Germany has increased steadily during the last 12 months, and now is 13 per cent. above a year ago.

NOW THEY ASK FOR MORE

IT'S NO WONDER YOU WANT TWO MORE BOXES OF MY MAGIC BAKING POWDER. YOU KNOW I HAVE TO USE IT TO GET THE BEST RESULTS. I'VE BEEN BAKING WITH IT FOR YEARS AND I'VE NEVER HAD A FINE CAKE WITHOUT IT. I'VE BEEN BAKING WITH IT FOR YEARS AND I'VE NEVER HAD A FINE CAKE WITHOUT IT. I'VE BEEN BAKING WITH IT FOR YEARS AND I'VE NEVER HAD A FINE CAKE WITHOUT IT.

DON'T RISK FAILURES
... Good baking powder is especially important to good cake. That's why Canada's leading cookery experts use and recommend Magic. They have found Magic is absolutely dependable. It assures perfect leavening... delicious cakes every time! And Magic costs a little less than 1¢ a cake. It's actually, less than 1¢ worth makes a fine cake! Ask your grocer for Magic!

Made in Canada

Not Using Father's Room

King Edward Transacts State Business On Ground Floor Of Palace

King Edward is using a room on the ground floor at Buckingham Palace for receiving his official visitors and for transacting State business, reports the News of the World. It is decorated in Chinese style, with red and gold lacquered chairs, and was used in the last reign as a waiting room for those who were going to have an audience with King George. King Edward has had a large square-top desk put into the room for his use. The big room on the first floor, which the late King used for his work, was always known as "The King's Business Room." It is still just as King George left it, and King Edward, for the present, is not using any of the rooms on the first floor. The new King enters and leaves the Palace by "The King's Door," the entrance being on the right-hand side of the inner quadrangle of the Palace. He went through this door, which custom decrees must be used only by the reigning sovereign, for the first time on his historic flight to London from Sandringham. Several times the King has passed in and out of the Palace unrecognized by the crowds at the gates on account of the fact that he prefers to use his own private black saloon car rather than the familiar Royal motor and scarlet cars which King George always used. The King's car still carries a registration number, though now as the personal motor car of the monarch, it is exempt from taxation. This Royal car is easily distinguished by the G. E. sign on the back, which is in a very unusual position—on the centre of the spare-wheel cover.

Tourists Are Collectors

Hotels Lose Many Different Articles To Souvenir Hunters

Souvenir-hunting and not a desire to steal, is accountable for most of the odd trifles by hotel guests, Victoria, B.C., hotelmen claim. Many and varied are the things which disappear. Towels head the list. One hotel estimated that its dozen towels purchased last summer, five dozen already have been carried off. Thirty dozen towels is the average annual loss for a hotel. Silverware and teapots come a close second. Salt shakers and sugar bowls are also popular. Towels, silverware, teapots, and other light bulbs, telephone books, tumblers and glassware are also reported.

Some hotels reported losses of sheets and blankets. One enterprising guest carried away the glass-encased screen which held the mirror in his bathroom.

Finding soap in the bathroom after a guest has left is a pleasant surprise to most hotelmen. Collectors with a penchant for room keys are the biggest trouble. Some men have been known to pick up collections of several dozen keys picked up in hotels.

Women guests, state hotel operators, are more wary than men. Their make-up causes losses which run into high figures. Owners say some brands of lipstick cannot be removed from towels without ruining the material.

Scenic Highways

South Australia Is Making Roads Attractive To Travellers

Among the public works designed in South Australia are highways, but they do not aspire to mere roads, plain ribbons from place to place. Adelaide is making a driveway of 20 miles around the harbor bays overlooking some 20 beaches. Another part of the Anzac Highway running out of Adelaide toward Melbourne will cost over half a million dollars. This one will have two lanes of one-way traffic, with a garden section in the centre, and tree-lined footways on either side. Canada could do with more such scenic highways—Brandon Sun.

By Way Of Contrast

Of George V. it can be said that he died in peace, loved by his people. A king, says the New York Post, could ask no higher praise in an age that has seen three emperors dethroned, several kings assassinated or exiled and dictators ruling by terror—the dictators themselves terrorized by fear of what their subjects would do to them if they ever got the chance.

"What letter comes after 'h'?" demanded the teacher.

"Please, Miss, I don't know," answered Tommy.

"Well, what have I on each side of my nose?" pressed the teacher.

"Looks like powder, Miss," said Tommy.

Perhaps the hardest promise to keep is the one made at the family reunion to write often.

The British warships do not seem to have been frightened out of the Mediterranean.

Mexico has 11 states with an average altitude of over a mile above the sea.

It is estimated that there are approximately 20,000 Mohammedans in North America.

WAKE UP YOUR LIVER BILE—

And You'll Jump Out of Bed in the Morning

The liver should get out two pounds of bile into your bowels daily. If this bile does not flow, your food does not digest. It just decays in the bowels. Gas builds up, stomachs grow into the body, and you feel sour, weak and the world is too big for you. A small bowel movement down 'takin' get at the cause. You need something that works on the liver as well. It takes three good, old, Carter's Little Liver Pills to get things moving. They make the bile flow freely and make you feel better. They are the only pills that make the bile flow freely. They do the work of nature but have no harm or injury in them. Ask for Carter's Little Liver Pills by name! Habitually refuse anything else. See.

Puzzle For Scientists

Vegetation Again Seen On Volcanic Island In Indian Ocean

Scientists are puzzled over the return of vegetable animals and insect life to Krakatoa Island, a barren lava stretch for many years following a volcanic eruption. Dr. Diamond Jenness, anthropologist of the Dominion Museum, Ottawa, said at Victoria, B.C., on his return from a far eastern voyage.

Krakatoa's eruption occurred near the end of the last century and the island left above the Indian ocean was a smoking waste. The top was blown off the mountain, and the ensuing tidal waves which swept the Malay coast and East Indies caused more than 30,000 deaths.

"Trees and other vegetation now grow in profusion," said Dr. Jenness, "and insects and animals have returned to the island."

He said he was impressed by the progress in Java, which he also visited. It had become modernized under Dutch rule, with excellent railroads, air service, and roads.

Java produces 85 per cent. of the world's quinine supply, he said, and agriculture is its sole industry. More than 500,000 Chinese are included in its 40,000,000 population.

One of the most impressive sights gallery more than a mile long, for the visitor is a temple with a taining a frieze decoration depicting the life of Buddha.

Motor Road Under Alps

Plans For Tunnel Have Been Submitted To Swiss Railway

It will be possible to motor under the Alps between Switzerland and Italy through the famous Simplon tunnel if plans submitted to the Swiss railway authorities are carried out.

They provide for the establishment of a motor road through one of the two tunnels on the Pacific coast south of Vancouver, was a member of the expedition, and A. H. Scot, 84, now living on a cattle ranch near The Pas, Man., was another.

The force left Toronto June 6, 1874, to police the west. From the end of that year, the force of the troops marched 160 miles to Dufferin, Man. (now Emerson), 60 miles south of Winnipeg. A few of their number were dropped off here and there to form police posts from Manitoba to British Columbia.

Another, Mr. Sutherland, former blacksmith and Glasgow policeman, who joined the force in Hamilton, Ont., at the age of 25, recalls vividly hardships on the march through mud and swamps in summer and blizzards in winter.

Gold Medal Awards

Royal Society Of Canada Recognizes Outstanding Achievements

An assortment of gold medal awards by the Royal Society of Canada for outstanding achievements in natural science, literature and history was made following a meeting of the society at Ottawa.

Dr. J. B. Collip, professor of organic and biological chemistry at McGill University, had been awarded the Flavelle medal for distinguished work in any of the fields of natural science. The Lorne Pierce medal for achievements in literature was awarded to Dr. Fehman Edgar, of Victoria College, Toronto, and the Tyrrell medal for outstanding work in history was given W. Stewart Wallace, librarian of the University of Toronto.

Don't waste time arguing with people who don't know any more than you do.

Stability In Government

Many Business Men In Politics Prove To Be A Failure

This current notion that politicians are the bane of Canada, that some sort of business Fascism would balance all our budgets and cure all our other ills, what is it based on? Mostly, we suggest, on ignorance. Between 1925 and 1930, in the matter of crazy over-expansion, did our business leaders exhibit greater wisdom than our politicians?

They want "business men" in politics. Over a considerable period of years, we have seen many business men in politics, and in nine cases out of ten they were failures. They were failures for the simple reason that business and government are two vastly different things, with the idea that government can be run on business principles, without scores of other and compelling factors entering, a myth, and a dangerous myth. The actual truth is that the average business man, lacking in knowledge of the history, philosophy and human background of government, is more often than not a misfit in government, and causes a positive peril.

Let's get rid of the "politicians," they say. Well, Germany did that—and got Hitler; and Italy did it—and got Mussolini. True, there was a time when those two notable dictators were great heroes in the eyes of certain people in this country, but hardly now. The glamor has gone and the spell; it is beginning to be discovered that the mere destruction of "professional politicians," with dictators hacking their way through things, including lives and human values, may not be the right way after all.

At any rate they are beginning to notice that Signor Mussolini's success at balancing budgets, and Herr Hitler's, hasn't been conspicuous, that a much better job of the thing is being done in England—in that of England which sticks to her parliamentary system and, incidentally, to her "professional politicians."—Ottawa Journal.

Mounties' First Trek

Force Left Toronto In 1874 To Police West

Only two of the North West Mounted Police who trekked across the western prairies to the Rocky Mountain foothills in 1874 are alive today, Staff Sergeant James A. Sutherland, 85, believes.

Mr. Sutherland, who lives in a small town on the Pacific coast south of Vancouver, was a member of the expedition, and A. H. Scot, 84, now living on a cattle ranch near The Pas, Man., was another.

The force left Toronto June 6, 1874, to police the west. From the end of that year, the force of the troops marched 160 miles to Dufferin, Man. (now Emerson), 60 miles south of Winnipeg. A few of their number were dropped off here and there to form police posts from Manitoba to British Columbia.

Another, Mr. Sutherland, former blacksmith and Glasgow policeman, who joined the force in Hamilton, Ont., at the age of 25, recalls vividly hardships on the march through mud and swamps in summer and blizzards in winter.

Warlike Indians and whiskey runners soon found their activities cut short by tiny patrols administering many miles of territory.

Once Sergeant Sutherland and a companion entered the camp of Sitting Bull and his 2,000 warriors fresh from the Custer massacre and arrested a bad man. Sitting Bull and his army had fled into Canada after the Custer affair.

Declaration In Autumn

King Will Take Oath To Maintain Protestant Religion

The king is expected to subscribe to the accession declaration in the autumn. This oath ensuring the maintenance of the Protestant religion by the crown, must be made by the sovereign on the day of the meeting of the first parliament after accession or at the coronation, whichever comes first. Before the declaration will be "made, subscribed and audibly repeated" by the king at the opening of the new session.

Power Of The Moon

We are of the opinion says the Mayfield, Kentucky, Messenger, that the sun and the moon and other bodies in our ethereal universe do have some control over things on earth, and even on human beings. If the moon can control as big a thing as the Pacific or Atlantic oceans, surely it could have some effect on a crop of potatoes, or corn, or even a human being.

Wants Century-Old Flow
If you have a 100-year-old flow, and can prove it, there's a man in Texas who would like to borrow it for a couple of days. John C. Townes, president of the San Jacinto Centennial Association, wants to use it to break ground for a \$1,000,000 shaft that will be erected on the San Jacinto battlefield on its 100th birthday.

Squids change color merely by expanding their body spots.

DIXIE gives you a long cool smoke... And it's always FRESH in the plug.

DIXIE PLUG SMOKING TOBACCO

Took Secrets With Him

Man Who Trapped Spies During War Is Dead

A man who was one of the masterminds behind Britain's anti-spy system during the War was dead, carrying with him many of his secrets.

He was Hugh Clandford Hoy, private secretary to Sir Reginald Hall, director of Naval Intelligence in the most fatal days of 1914-1918. He died in Charing Cross Hospital, London, from gangrene induced by a form of hardening of the arteries from which he had suffered for about two years. He was 59.

Working in 40 O.B., a room in the old Admiralty building whose existence was unknown to the outside world, Mr. Hoy and his colleagues gathered into their fingers all the webs of intrigue and espionage which Germany had spun across Britain—gathered them and snapped them, one by one.

Not until years after the War was the veil partly lifted from that secret room. In the book "40 O.B.," published in 1932, Mr. Hoy told for the first time some of the story of those days and nights of intrigue and counter-intrigue. But in this work he wrote: "I have been obliged to omit many startling and exciting matters... I have had to remember—and also to forget."—Overseas Daily Mail.

SELECTED RECIPES

DINNER ROLLS

2 cups Basic Sponge
1/2 teaspoon salt
1 tablespoon sugar
4 tablespoons melted shortening
1 egg well beaten
4 cups flour (approx.)
1 cup milk

2 cups Basic Sponge, add salt, sugar, shortening, milk and egg. Stir well and add flour enough to knead smooth. Cover well and allow to stand in warm place until double in bulk (about 1 1/2 hours). Knead and form into rolls. Place apart on greased pan and allow to rise until double in bulk. Bake in hot oven for about 25 minutes.

Highway Crossing Accidents

Collisions Between Automobiles and Trains Show Increase

Accidents at highway crossings in 1935 involving collision between motor vehicles and trains totaled 213 compared with 182 for 1934, a report of the board of railway commissioners announced.

Of the 1935 figures, 61 accidents were instigated in which motor vehicles ran into sides of trains, involving 13 persons killed and 90 injured, compared with 55 accidents of a like nature in 1934 in which seven were killed and 76 injured.

Some Cherry Pie

The largest cherry pie in the world was cut Feb. 15 by William J. Stewart, former mayor of Toronto. The "daddy" of all pies measured more than six feet in diameter and contained 30,000 cherries. The cutting inaugurated cherry week in Toronto.

Small Military Force

The smallest British military force in the world is located on the Pacific islands of Gilbert and Ellice. The Ocean Island Defence, as it is known, consists of one officer and 20 "other ranks."

Italy's Hospital Fleet

Modern Ship Has Refrigerating And Ice-Making Plants On Board

Mussolini recently sent on its maiden trip the largest and most complete floating hospital on the seas to-day.

The S.S. Gradisca is the eighth of Italy's hospital ships. It will ply regularly between Italian ports and East Africa, taking back to the fatherland Italian workers and soldiers who have fallen ill while building Mussolini's African empire.

The ship has a displacement of 20,800 tons and a length of 660 feet. She has a normal capacity for 754 beds, but can be made to accommodate twice that number in an emergency.

Some of its modern equipment consists of two operating theatres, an X-ray room, and bacteriological, biological and chemical laboratories as well as a fully supplied pharmacy. There are also oculists' and dental laboratories aboard.

Besides carrying a refrigerating plant for keeping the patients' food supplies constantly fresh, the Gradisca is also supplied with a huge ice-making plant with a sufficiently large capacity to enable her to supply ice to the various Italian ports in East Africa.

The Italian hospital fleet, officials claim, is used exclusively for sick workers and soldiers, the wounded being left at hospital ashore. Many of those who become ill, it was added, never reach Italy, but are returned immediately, because they recover while on board, due to the rest, the sea air and the care they receive on these ships.

Believed Link With Hittites

Relic Found In 4,000-Year-Old Tomb In Asia Minor

What is believed to be the first step toward the discovery of the lost Hittites, who appear in the Bible as a great imperial power, has just been found in Asia Minor. In a 4,000-year-old tomb was discovered a Hittite statue of a bull, seven inches high and inlaid with gold. The silver smith's art is astonishingly modern, and indicates that the race was cultured rather than primitive as previously believed. The discovery has aroused great interest among European archaeologists because previously nothing had been known of the Hittites' work except rock carving and a few potsherds. The relic was exhibited recently in London.

Lasts For A Lifetime

New Lead Pencil Requires No Sharpening Or Refills

Perhaps it was years of experience in the school room that inspired Wynn E. Eisenhauer of Halifax to invent a lead pencil that can be used a lifetime without refill or sharpening. Eisenhauer, secretary of the Maritime Teachers' Bureau, has constructed just such a pencil and it is the basis of a patent issued by the United States patent office at Washington.

Will Study Rheumatism

Dr. A. A. Fletcher of Toronto was elected president of a national society for study and control of rheumatism constituted at Ottawa at a meeting of physicians from many parts of the country. Dr. Frederick Cadman, Manitoba bacteriologist, was named second vice-president.

at the FIRST SIGN of a COLD take GROVE'S LAXATIVE BROMO QUININE

Grove's does the four things necessary to kill a cold quickly; opens the bowels, relieves the cold germs and fever in the system, relieves the headache and "gritty" feeling, tones up the entire system. At all Druggists. Ask for Grove's. They're in a white box.

Evergreens Recommended As Best Shelter Belt For The Prairie Farm

Late winter is the ideal season for studying and planning farm home improvements, because it is possible to observe the outside features of the general layout and the effects of winter storms and drifting snow around the yard and farm buildings. At this time it is easier to discern the places in the general view most vulnerable to the weather which will suggest a plan for the proper disposition of shelter belts and wind-breaks to minimize the discomforts associated with the long winter period.

From a protection standpoint, the broadest shelterbelt has the greatest value and serves a wider purpose during the full leaf period. Through the late fall and winter months, however, its protective influence is considerably reduced and there is need for more substantial planting for winter effect. To this end a very effective barrier to winter weather may be provided by a judicious and careful planting of evergreens.

Two or three rows of these as a separate planting or to supplement the existing broadleaf belt will give considerably more winter comfort around the farm yard than several rows of broadleaf trees. In fact, they will form an impenetrable wall through which no wind can penetrate. When all other trees are dead and leafless, the evergreens stand out in bold pleasing relief, giving very substantial protection and a sense of home comfort around the place.

There are not enough evergreens on the farms of the West. Certainly not as many as there would be if farmers only realized how well they can be grown and how valuable they are to the farm home site. For beauty and ornament there is really nothing that adds to the cheerfulness and comfort of the outside view in the winter months like a generous planting of evergreens. They have an all-year round freshness and in winter when there is no other green thing in sight the value of a good evergreen windbreak is considerable.

Evergreens to supplement existing broadleaf plantings are recommended for every farm. Once established they are more drought resistant than many of the broadleaf trees and they can be successfully grown in practically all types of soil. Evergreens to supplement existing broadleaf plantings are recommended for every farm. Once established they are more drought resistant than many of the broadleaf trees and they can be successfully grown in practically all types of soil. Evergreens to supplement existing broadleaf plantings are recommended for every farm. Once established they are more drought resistant than many of the broadleaf trees and they can be successfully grown in practically all types of soil.

The opinion is often expressed that evergreens are too slow-growing and hard to start. Evergreens do grow slowly while young but when they have reached a height of three or four feet their growth is quite rapid and then from 12 to 24 inches of new growth yearly may be expected. They are not hard to start provided certain methods of handling are followed. The mature roots are extremely sensitive to the least exposure to sun and air, and for this reason, both before and after planting, the roots should be immersed in a mixture of soapy mud to prevent any cause of drying out which would be fatal and which is probably one of the main causes of young evergreen failures. Then after planting, the trees will require some protection especially in soil drifting areas to prevent damage to the tender young seedlings by soil particles. In the early spring months young evergreens will undoubtedly suffer injury from sunscald due to sudden changes in day and night temperatures when warm days induce sap activity and cold nights or freezing temperatures rupture the leaf cells. A good snow cover will prevent this damage to a large extent but it is advisable to also place a window of straw or brush, a single or similar screen to provide shade on the south side of the trees. This is a very important procedure for at least two seasons after planting.

Cultivation during the growing season must be frequent, thorough, and in all cases shallow. Evergreen roots are fairly close to the surface and deep cultivation will quickly destroy the fibrous feeding roots. Watering is not usually necessary except during very dry spells when a thorough soaking at intervals is preferable to frequent application of small quantities. In addition to the possibility of sun scalding in the young growth stage, evergreens are often subject to rabbit injury. Feeding against this pest is not altogether practical on a large scale and is quite expensive. As a protection against both sun and rabbits the use of building paper or burlap, wrapped around the small trees in the late fall is recommended for the first three years. If there is a good snow cover, only the exposed growths will require this protection. This protection should, of course, be removed each year as soon as settled spring weather sets in.

More evergreens have died in drought years from the ravages of insect infestation than from actual lack of moisture. Trees that develop

Has Strategic Value

Christmas Island Is Considered Gibraltar Of The Orient

Christmas Island is not an abode of peace and good-will, as its name would imply. R. M. MacDonald, writing in the Empire Review, London, recalls that it is a lone tract of land which juts above the surface of the Indian Ocean about halfway between Asia and Australia, 200 miles south of Java, and, in the opinion of those in authority, will loom large as a Gibraltar of the Orient should that part of the world become a danger zone. Few people outside the British Admiralty know anything about Christmas Island and the Admiralty is fully aware of its strategic value. It is about ten miles in circumference, and rises straight from the sparkling blue waters of the ocean to a height of about 800 feet, an ideal place for a naval base. It belongs to Britain and is a dependency of Singapore.

The island itself contains important deposits of phosphates, which provide the chief industry for all the inhabitants, 2,000 in number. The interesting part of the island lies in the deep water around the shore line, where on submarine ledges of that same shore there are beds of pearl oysters and a heavy infestation will quickly defoliate a tree. However, their depredations, if noticed in time are easily controlled by spraying with the following solution: Two pounds of lead arsenate and 1½ pounds of hydrated lime to 40 gallons of water.

The above are probably the most common and destructive insect enemies of Spruce and Pine occurring in the prairie provinces at the present time. Samples of shoots from trees suspected of infestation should be forwarded to the Entomological Laboratory at Indian Head, Sask., for proper identification and advice on control.

Flood Of New Gold

Production Of Yellow Metal Passes Billion Mark Last Year

A flood of new gold, so vast that yellow metal mining passed the \$1,000,000,000 mark for the first time last year, with a promise of mounting volume for years, was reported to the American Institute of Mining and Metallurgical Engineers at New York.

As the session on mineral economics by J. C. Croston, Boston mining engineer, reported the 1935 gold mining high mark. The United States, South Africa, Russia and Canada were the main producers of gold.

As an indication of what is to come, Croston cited the Witwatersrand gold area in South Africa. This region already has 35 large mines. But 14 new companies, an increase of more than one-third, are now engaged in large-scale development in that area, Croston said.

"It is expected," he explained, "that these new companies will spend over \$110,000,000 before reaching production, will employ 15,000 white men and 135,000 natives and will produce about 3,000 tons of gold annually—more than the United States and Canada produce at present."

Raw Materials Not Scarce

Nations Can Get Anything If They Try

Fe The Crillon said: "The truth is, as Sir Norman Angell has been pointing out, there isn't any scarcity of raw materials anywhere. Quite the reverse. There is an excess, and Japan and Germany and Italy can get them as any other nation can—even the nation that produces them—by paying the price. When Great Britain founded her greatest export trade—the cotton trade of Lancashire—Sir Norman points out, she didn't have to conquer Louisiana or Texas to do it. And there isn't any great advantage, so far as Lancashire is concerned, in drawing supplies from India or the Sudan instead of from Texas—Vancouver Province.

Analyzes Grain Future

Canada Has Hard Road Ahead States Prominent Authority

Canada's grain situation was more hopeful than for the past four years, Norman M. Paterson, of Fort William, prominent grain authority, said in an address at Montreal: "We still have a long, hard road ahead of us. We must not minimize it by being foolishly optimistic for to regain our lost markets might entail a war of attrition."

"It was to be realized, for example, that we must sell a product at a competitive price whatever that price may be. Some country may have to go out of the grain surplus producing business; it must not be Canada."

During the World War, before the United States entered, an American traveler tried to strike up a conversation with an Englishman. He mentioned the Battle of the Somme and quipped, "Some Battle!" The Englishman retorted, "Some don't!"

Great Britain has four members of its empire represented diplomatically in Washington, D.C. They are Great Britain, United States of America, Dominion of Canada and Irish Free State.

Nothing is achieved by sitting still, we are told. How about here?

A FRIGHTFUL TOLL
—White in the Tampa Tribune

Large Order Placed

Super-Warplane To Be Built For Royal Air Force

The air ministry have placed a very large order with Vickers-Armstrong, Ltd., for a new type of super-warplane for the Royal Air Force, built on a secret principle so revolutionary that it is not yet clear even to experts.

The machine, it is declared, could be ridden with bullets without collapsing. It is constructed of water-tight spars and tubes which can be stamped out by the presses of any big motor-car factory and easily assembled.

The form of construction is known as the Wallis Geodetic, after its inventor, Barnes Neville Wallis, designer of structures to Vickers, who has devoted five years of research in the higher mathematics to its perfection.

Foreign air powers, it is stated, would give a fortune for its secret.

It is claimed that its performance up to date, if disclosed, would cause one of the greatest sensations in aviation since the Wright brothers first flew in 1903.

Claim Baldness Inherited

Experts Give Report After Making Study Of Subject

Baldness is to a large extent due to whether or not a person's father or mother is bald, according to the finding of experts.

A study made by Ohio State University officials, reported in the magazine Human Biology, shows that baldness is transmitted from father to son.

"The sons of a bald woman will all be bald," is one of their findings. A woman never is bald unless her father was. When both parents are bald, the sons must all be bald, but some of the daughters may not develop baldness.

Baldness is more common in men than women and is generally transmitted directly from a father to half or more of his sons but only to an occasional daughter.

Rabbit Brought Luck

A piece of tin "mined" by a rabbit has brought luck to a prospector named Caldwell near Alice Springs, Northern Territory, Australia. While he was surveying the ground the rabbit threw up from its burrow a piece of tin the size of a table-tennis ball. As a result Caldwell is becoming comparatively wealthy.

A Fair Dividend

"I have spent nearly \$20,000 on that girl's education," complained the aggrieved father, "and here she goes and marries a young fellow with an income of only \$1,000 a year."

"Well," said the friend of the family, "that's five per cent on your investment. What more can you expect in these times?"

Mummy Motifs Trim Small Linens

Want to insure a gay, light-hearted breakfast-time? Then decorate your breakfast-table and curtains with these amusing Mummy motifs, if you'd see smiles take the place of frowns. In five- to five-inch cross stitch, the motifs are best done in gay colors, on breakfast cloth and napkins, curtains, pillow, scarf or tea cloth. It's fun, too, to match them up with the companion Mummy Towels.

In pattern 5356 you will find a transfer pattern of four motifs averaging 6½ x 8 inches, two motifs 3½ x 5½ inches, two motifs 3½ x 4½ inches, and four motifs 1½ x 3 inches; color suggestions; illustrations of all stitches needed; material requirements.

To obtain this pattern send 20 cents in stamps or coin (cash preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Many Marvels In Plant Life That Scientific Theory Is Inadequate To Explain

Future Rests On Cooking

Urges Support Of Teaching Domestic Science In Schools

Canada's future rests on its cooking, Dr. C. T. Curry, director of the Royal Ontario Museum of Archaeology said. He urged support of domestic science schools. "We are a nation of dyspeptics," he said. "Others will drive us out if they have more energy. If we do not encourage a better diet, we will not hold the country. Food is the basis of all work."

Dr. Curry addressed the Ontario Vegetable Growers Association and corrected an impression gained from his speech that he declared women were lazy. He said women have to work just as hard these days as they ever did because in the old days women had more help.

A statement by Dr. C. T. Curry that "women are growing so lazy they won't make the effort to cook the family meat," brought an irate answer from Miss Agnes Macphail, woman member of parliament from Grey-Bruce and authority on cooking.

There is a tendency to neglect the cooking of vegetables because of sheer laziness," Dr. Curry, Toronto archaeologist, said, adding women go to the corner-store to buy prepared food and that the eating of the lazy forms of food increased the danger of universal dyspepsia.

"Dr. Curry sounds as if he was suffering from a bad attack of indigestion himself," Miss Macphail said. "Out our way most women cook two, three and even four varieties of vegetables for the midday meal in the summertime. A large salad is almost regulation menu for supper."

Sea Safer Than Highway

British Ships Lose One Passenger To 333 Killed By Cars

There have been few ocean voyages for people, between Montreal and Liverpool, who have not on reaching their destinations called back to the folks at home: "Arrived safe; all well."

But ocean travel has become so safe within recent years that this route formerly seems almost a waste of money. Not since the Norwegian collier Storstad rammed the C.P.R. liner Empress of Ireland nearly 22 years ago in the Gulf of St. Lawrence, has there been any passenger ship wrecked on one of the busiest routes in the world. People get on the ships at Montreal or Liverpool and expect to reach the other side as a matter of course. And they do; but invariably they send cable messages saying they arrived safely.

The British Chamber of Shipping in a recent statement on the safety of ocean travel points out that it is two and a half times as safe as before the war, due to better navigation instruments, greater precautions and better weather data.

The Chamber states that British ships are safer than those of any other nation, and that for every passenger life lost at sea 333 persons are killed on the highways in automobile accidents.

Our highways are much more dangerous than the highways of navigation. Yet nobody ever thinks of sending a telegram back home after a journey of 100 miles to say they arrived safe.

They should.

—St. Thomas Times-Journal.

New Service For Tourists

Bureau To Receive Complaints Opened In Paris

Tourists in France who have umbrellas in buses, leave baggage behind in railroad coaches or discover that a Paris taxi driver has overcharged as well as taken them several kilometres out of their way, can lodge complaints with a bureau which has been established by the ministry of public works.

In an attempt to fortify and build up the old tradition of French hospitality, the new office will try to facilitate matters for travellers who encounter difficulties. A special consulting committee has been named to work in conjunction with the national French tourist bureau, and the committee will take immediate steps to investigate any sort of discourtesy or difficulty encountered by anyone travelling in France.

Finally Gave Way

An actor who had had a slight motor accident and had sticking plaster on his nose as a result, called upon the local tax collector.

"Had an accident to your nose?" the latter said, sympathetically, as the victim entered the room.

"No," said the actor, "I've been paying through it for so long that it has given way under the strain."

In recent years some scientists have arrived at the conclusion that plants feel somewhat the same way that animals do. Gardeners, who know how some ferns are affected when some one brushes against them, will approve this decision. The old saying that flowers grow better in the garden of one who loves them has a basis in fact. Now the botanists are asking themselves, do plants think? According to an article by Dr. Raoul Franco, in the Pastor Lloyd, of Budapest, reproduced in the Magazine Digest, there is evidence to conclude that they do.

In the article mentioned reference is made to a eucalyptus tree whose roots spread over an area fifty feet square. The roots of the eucalyptus seek whatever water course is adjacent, and in the case cited the roots were barred by a wall that ran beside the canal. But this did not baffle the tree. One of its roots grew out of the ground and up the wall to a hole a few inches from the ground, went through it, down the other side into the ground and so made its way back to the brink of the canal. Did the tree do this blindly, or did it have some sense that instinct told it that through the hole in the wall it could reach the needed water?

The extraordinary way in which plants grow has engaged the correspondence columns of John O'London's Weekly for many months. The readers of this periodical have been supplying the curious with accounts of the unusual ways in which plants act, when faced with problems which must be solved if they are to continue to exist. One correspondent mentions a case that has a similarity to that of the eucalyptus tree. In a cave in the Midlands he saw the white roots of a tree, about 12 feet or 14 feet high, dangling from the top of the roof of the cave to reach the water at the floor. "How," he asked, "did the tree know the moisture was there so far below?"

People who have clipped hedges must have often come across an example of a plant's fight for life, similar to that recounted by another correspondent. At the bottom of his garden was an old-established privet hedge eight feet high and two and one-half feet thick. One day, when he was about to trim it, he noticed a thistle bloom eighteen inches from the top of the hedge. He traced downwards to the ground the stem of the thistle, "a mere smooth, green tube without trace of leaf or side-shoot. Not to be denied a 'place in the sun' it had patiently pushed its 'pipe line' upwards for some eight feet, and having reached air and light, had resumed all its thistle characteristics, still nourished through its 'pipe line'." The writer observes: "Surely it needs very little imagination to see some element of 'thought' on the part of the plant in adopting such an expedient in unfavorable circumstances."

Space forbids the citation of any more of these interesting observations of plant life. But there is one fact about which the lawn owner may ponder. How is it that on a lawn dandelions and other weeds grow leaves that lie flat on the ground, while in the flower bed these same weeds thrust their leaves upward. Do the weeds anticipate the attention of the lawn mower? Whatever the answer, the facts demonstrate that in plant life there are marvels which recognized scientific theory is inadequate to explain.

Always In The News

Cat Is Never Very Long Absent From Press Columns

The cat is the animal that is always in the news. If someone who loves dogs and someone who dotes on cats should subscribe in friendly rivalry for the press, the cat would be the cat that has much the better press, not the slightest doubt. The cat is ever on a telegraph pole, being extricated from between walls and floors, extracted from chimneys or from under the hood of a parked car. In and out of the silly season she is born with more than a fair allowance of toes or pictured mothering day-old chicks, puppies. She runs up a high annual score of column inches in the news and is never long absent from the columnist's comment and anthology. Editorial page correspondence can get hot over the seemingly simple question: what is a tabby cat?

Collector's Unique Hobby

Some collect postage stamps, coins, match covers, chairs, or cigar bands. But we give you Charles E. Davis of Hartford, Conn. He collects of all things elephants' tail or whisker hairs. Davis, who belongs to the Circus Fairs of America, has 112 different elephants represented in his hair collection, and his biography of elephants, of which he has 425.

All steel articles can be preserved from rust by putting a lump of fresh burnt lime in the drawer or case in which they are kept.

The Transvaal is trying to stop competition between dog and horse race tracks.

Recipes

BEANS

Dried beans are a cheap and appetizing source of protein, and should be used as the main course of a meal—or as a meal substitute rather than as a potato substitute.

BEAN SCALLOP

One cup beans, 2 tablespoons of butter, 2 cups cornflakes, 1 1/2 teaspoons salt, 1 No. 2 1/2 can of standard quality tomatoes.

Soak one cupful of beans overnight. Cook until tender. Add melted butter, tomato and seasonings. Stir in cornflakes. Turn into a buttered baking dish and bake in a moderate oven until brown. Serves four.

BEAN CHOWDER

Two cups beans, 2 carrots, diced; 2 small onions, diced; 2 medium-sized potatoes, diced; 3 teaspoons salt; 1 No. 2 1/2 standard quality tomatoes; 1/2 cup sliced fat salt pork or 2 tablespoons bacon fat; pepper, celery, salt.

Soak beans over night in two quarts of water. Cook until nearly tender with the salt pork. Add the vegetables and seasoning one-half hour before serving time. Serves six.

BEAN LOAF

Four cups cooked beans; 1 cup of bread crumbs; 1 teaspoon salt; 2 tablespoons tomato catsup; 1 egg (well beaten), a little pepper.

Mash the beans. Add other ingredients in order given. Bake in a greased pan 30 minutes. Serve hot with tomato sauce. Serves six.

BEAN AND CORN SCALLOP

One cup beans, 1 small onion, 2 cups canned corn, 1 green pepper or pimiento.

Pick over beans, wash, cover with cold water and soak over night. Simmer until tender.

Fill a baking dish with alternate layers of beans and corn. Sprinkle each layer with salt, onion and pepper. Cover the top with buttered crumbs, and bake 1/2 hour at 325 degrees Fahrenheit. Serves six.

WILLIAM POWELL IN "RENDEZVOUS" AT THE AVALON

The never-before-told story of the loves and intrigues that decided a nation's fate, "Rendezvous" will be shown at the Avalon Theatre tonight, Friday and Saturday.

William Powell is featured with Rosalind Russell and the cast includes Binnie Barnes, Lionel Atwill, Cesar Romero and Samuel Hind.

Olivia, played by Rosalind Russell, is a mysterious beauty of whom Washington knew nothing. Major Brennan had been her only friend.

And now her exotic charms shadow the life of the unsuspecting Bill Gordon, played by William Powell.

A dramatic episode occurs when there is only 48 hours to save 3000 men . . . to save ships . . . to win a battle 3000 miles away. The navy hinders into action . . . an enemy is repulsed . . . love and intrigue make your pulse beat faster as William Powell unravels the most amazing romantic mystery of his screen career. A thousand dangers matched by a thousand laughs in the delectable Powell manner . . . another great screen treat from M-G-M.

NOTICE TO CREDITORS AND CLAIMANTS

IN THE MATTER OF the Estate of MARGARET GRAHAM, late of near the Village of Blackfalds, in the Province of Alberta, Spinster, deceased.

NOTICE IS HEREBY GIVEN that all persons having claims upon the Estate of the above named Margaret Graham, who died on or about the 29th day of November, A.D. 1935, are required to file with the undersigned Solicitor for the Executor of the Estate of the said deceased by the 9th day of April, A.D. 1936, a full statement duly verified of their claims and of any securities held by them, and that after that date the Executor will proceed to distribute the assets of the deceased among the parties entitled thereto, having regard only to the claims of which have been brought to the knowledge of his Solicitor.

DATED this 10th day of March, A.D. 1936.

J. S. McCORMICK,
Lacombe, Alberta,
Solicitor for the said Executor.

Bentley

BENTLEY, March 10.—C. F. Damron was in Lacombe on Friday last, in attendance at the funeral of the late Charles Abbott.

Mrs. R. E. Chavon was hostess to the Searchlight Club on Wednesday last, when a good attendance of members was on hand. Following the usual mid-day dinner, the regular business meeting and discussions took place.

Postal Inspector Hale was here on Thursday last on post office business.

Mr. P. Slaughter returned from Edmonton on Friday, where he has spent the past couple of months with his daughter, Mrs. Birdie Storie.

Mrs. Percy Gilbert of Outlook district spent the past two weeks with friends in Lacombe.

Miss Skodopol was a week-end visitor at her home in Botha.

Born at Bentley Hospital, on Saturday, March 7, to Mr. and Mrs. H. Dickan of Bentley, a son.

The whist drive sponsored by the Sunset Women's Institute and held on Tuesday evening, March 3, at the home of Mr. and Mrs. A. B. Harstad was well attended, 16 tables being in play. Prizes went to Mrs. Tinas Christenson and Mr. Harold Peterson, with Mrs. Harold Peterson and Mr. Sverre Johnson receiving consolations. The proposed program of entertainment was cancelled on account of sickness. A hearty vote of thanks was extended Mr. and Mrs. Harstad for their hospitality.

The late Mrs. Sarah French, whose death occurred at Lacombe Thursday last, was one of the early pioneers of the Bentley district, coming here from Minnesota 35 years ago with her husband and settling in the Gull Lake district on the farm now occupied by Mr. Dick Cox. Following several years spent there, they retired from the farm and took up residence at Red Deer, where Mr. French passed away in 1915. Later Mrs. French moved to Lacombe. Interment took place in the Bentley cemetery on Sunday last. Mrs. Henry Peterson of Rainy Creek community is a daughter.

Ultimatum

(Continued From Page One) And failing all alternatives, the Premier will have no hesitation in doing so, according to his own declaration during the week.

Another thing that is obvious in connection with the Douglas-Aberhart episode is that the Premier has won more confidence with the business world by his determination to put the province on its feet financially before attempting to put his Social Credit plan into full operation than Major Douglas would have won by riding roughshod through all considerations of soundness and stability to place his theory in operation.

The Social Credit caucus decided Friday night to make one more effort to have Major Douglas concede to Alberta for the purpose of advising the government on the institution of Social Credit. A cable was sent to the London engineer saying: "Cannot discuss details by cable. Await your reply regarding arrival March 30."

Premier Aberhart, in enlarging on this situation, said Saturday: "Until we have further explanation of Major Douglas' suggestions we cannot give them satisfactory consideration. We think the only way Major Douglas can be of help to us is to come here. His cable would make it appear that he is not informed fully on the situation in Alberta." And that is where the matter stands at the moment of writing.

Everything else in the legislature has been overshadowed by the Douglas incident and that will hold the centre of the stage until finally ended. To outside observers it seems unreasonable to suppose that a responsible government would change its policy and scrap its introduced legislation merely at the dictates of an outside employee. To say the least about it, Major Douglas' ultimatum is in very bad taste.

There now seems to be no likelihood that the session will end before the 25th of March, at the earliest. Premier Aberhart himself suggested that date as the likeliest one. There are still some important matters to come before the members, although considerable legislation has been dealt with. The budget debate continues Monday and may last even longer and then there are the Social Credit bill, the Recall bill, and Education bill, all controversial measures, to be put through the various stages required before being passed finally.

The session has certainly been the most interesting and outstanding for years so far, and it promises to continue so to the end.

The Voters' List

(Continued From Page One) out in its entirety. Attempts to patch it up will only make it more confusing than it already is. As a first step in replacing it, some definite principle should be accepted. If the principle that but one vote should be cast in respect to any one property is accepted, then it should be faithfully followed through. In such circumstances no tenant should vote, except on a proxy of the owner and then only in the latter's absence.

But if it is deemed wise to go beyond the bounds of the principle above suggested, then it may be reasonably argued that the tenant, being the indirect payor of the tax on the property which he occupies, is also entitled to the franchise. This concession would, of course, violate the principle of 'not more than one vote in respect to one property.' But, having gone this far, we must proceed still further.

"If the tenant votes, it is entirely just that both owner and purchaser, providing that the owner of each appears on the roll as such, be given like privilege and, granted this, there remains no reason for including any number of joint owners, and, for the same reason, any number of joint tenants. Having gone thus far (and certainly all of the foregoing classes of potential voters should have vote, except on 'supplementary classes') we come to 'Relatives.'"

"Just why the franchise should be extended to the wife, husband, father, mother, son or daughter of an assessed person is more than I can say. The writer has never been able to fathom. Certainly, the only effect is to enable the assessed person who possesses a lot of such relatives to out-vote his neighbor who is less blessed."

"It seems to the writer that only one of two propositions is open. Either the franchise should be restricted to assessed persons, or definitely extended to embrace all bona fide adult residents. The municipal franchise should be either universally enjoyed, or it should be restricted to the shareholders in the

WORLD HAPPENINGS BRIEFLY TOLD

Dr. James H. Starr, 69, who helped map Lindbergh's flight across the Atlantic in 1927, died recently in New York.

The Dominion government has loaned the province of British Columbia \$4,500,000 accepting a four per cent. treasury bill for one year as security for the loan.

A colony of wild bees was discovered in a hollow tree by Howard Woolley near Waterford, Ont. They had a store of honey which extended 11 feet and was estimated to contain 125 pounds of the sweet syrup.

An order for 134,000 pieces of glass and china, including 7,500 tea and coffee pots has been placed with a Liverpool firm for the liner "Queen Mary".

Albert E. Calnan, editor of the Picton Gazette, a weekly newspaper, died at his home after an illness of several weeks. He was a past president of the Canadian Weekly Newspaper Association.

Alberta's first step to join other provinces in uniform legislation concerning life insurance is provided for in a bill containing 40 amendments to the Insurance Act, 1926, which received second reading in the legislature.

The Duke of York was promoted to higher ranks in all three defence services. The duke, now heir presumptive to the throne, was made an admiral of the fleet, a general of the army and air chief marshal in the Royal Air Force.

Alexander Pantages, wealthy theatre owner, horseman and veteran of the Klondike gold days, was found dead in bed at his home in Los Angeles. The cause of death apparently was heart trouble. He was 72 years old.

Advance reports from two steamship companies augur well for Churchill's 1936 navigation season. Transportation officials have announced increased bookings from continental ports to Manitoba's northern seaport indicated a prosperous season this year.

Mass Education in China

China is making a desperate effort to reorganize itself into a self-contained country with improved living conditions for its 400,000,000 population, said Miss Florence Kirk, Nanjing, China school teacher, in an address at Moose Jaw.

The central government, faced with great difficulties, is striving to remedy conditions under which China's millions labor. China is undergoing a renaissance, she said, and if present plans succeed the nation will have one language, a new system of communications, the ability to defend itself from outside aggression, and a state-wide health system.

Mass education is already freeing the people from ignorance and suspicion. Chinese people were courteous, kind, and worthy of respect. Poverty and starvation waited hand in hand with wealth and luxury, she said. Many Chinese live under conditions which would not be tolerated for one day in Canada. The ravages of drought, flood, and disease take a heavy toll annually, she related, and Christian missions in China have a heavy task ahead.

"The real hope of China lies in the enthusiasm of its young people," Miss Kirk said in conclusion.

Story About Late King

H. I. Phillips, in the New York Sun, says: The story we liked best about the late King George was the one that had him, as a youth in the navy, calling down to his elder brother, "Eddie, come up here right away and sing 'God Save Your Grandmother'!"

Approximately a million people in the United States have at least one bone broken in the course of a year.

The more a man knows about himself, the less he talks about himself.

Dahlias are now a source of doubly sweet sugar.

The Italian Adventure

Elizabeth P. McCallum, in The League of Nations Monthly News Sheet, Ottawa

It is quite commonly assumed that the Italian adventure was undertaken primarily for economic reasons. In a world where economic nationalism is rampant it has seemed natural to many that Italy should stretch out its hand to take Ethiopia in order to acquire a supply of raw materials for its factories, to create a new market for its manufactured goods, and to establish an outlet for its poverty-stricken excess population.

As time passes I grow increasingly impressed with the accumulation of evidence that there are not the authentic reasons for Mussolini's adventure in Ethiopia. The core of the problem presented by his policy is something else, and it would be a mistake for us to dodge the issues he has raised by focusing our attention on purely economic remedies.

I find it impossible to interpret Mussolini's campaign in terms of population pressure and of economic advantage to Italy. . . . But if we do not explain the campaign, where are we to look for the key to Mussolini's policy? The key is to be found, I think, in the article on Fascism which Mussolini wrote for the Italian Encyclopedia. He asserts that war and only war can raise human energies to their highest capacity. Other tests of character are shoddy substitutes. Fascism, he says, is contemptuous of pacifism inasmuch as it is merely a cloak for cowardice. War in itself is ennobling.

Mussolini asserts, then, that Italy must expand in Africa, he is not thinking primarily of economic necessity. What he is attempting to do is to raise the prestige of Italy, extend its possessions, its responsibility and its power, elevate its status as a self-confident and improve its character through a process of stiffening, so as to place Italy on precisely the same level as the strongest nations in the world to-day.

A Brilliant Physician

Lord Dawson of Penn Devoted to British Royal Family

Lord Dawson of Penn, who was the principal doctor attending the late King George, is a most brilliant physician who has long enjoyed the unbounded confidence of all the Royal Family. This was the third serious illness through which he watched over the King with untiring devotion.

Sir Bertrand Dawson, as he was then, served throughout the war, and was one of the first doctors to be called to the field hospital in France in 1915 when the King was so grievously injured after being thrown from his horse. He never left the King's side until His Majesty was safely home again in Buckingham Palace, and there attended him with unremitting care. Not until long after he had recovered did the world learn how severely injured the King had been. Again in 1928 Lord Dawson led the band of doctors who fought so resolutely for the King's life.

Lord Dawson married the daughter of the late Sir Alfred Yarrow, the shipbuilder, a love romance if ever there was one. Miss Yarrow had been ill, and with her father was about to set off on a health cruise aboard Sir Alfred's yacht. At the last moment Sir Alfred decided to take a doctor with them. "Young Bertrand Dawson," a coming man, was recommended. He went. Miss Yarrow recovered. "Young Dawson" lost his heart. They have been married for 30 years now.

They All Know How

Lord Hewart, British Lord Chief Justice and himself once a reporter, during the course of a recent address said: "I do not think there is any profession in the world which does its work better than the profession of the working journalist." Yet a whole lot of people are quite sure that they could do a lot better themselves.

The young man at the corner had been glancing at his watch and yawning down the street for about an hour. Presently the cause of his vigil arrived and greeted him with: "Hello! I hope I'm not late."

"Oh," replied the young man listlessly. "I suppose I can't grumble, you usually get the day and the month right."

The moon's position in the heavens have no relation to the weather, being uniform and computable for centuries ahead.

Artificial lemon oil is on the market.

Prehistoric Dragon Fly

Wing Of Thirty-Inch Specimen Found In Kansas

A remnant of one of the world's largest insects, a prehistoric dragon fly about 2½ feet long, was discovered in the limestone beds near Elmo, Kansas, by Dr. Frank M. Carpenter, of Harvard University museum, of comparative zoology.

Only a part of one wing of the giant insect was found, but there was sufficient of this to accurately estimate the size of the entire specimen. Many other insects of this same family have been found previously in other parts of the world, so it was not difficult for Dr. Carpenter to estimate the size from the portions of the wing.

The giant insect was a member of a group known as Protodonata and lived in the Permian Age about 150,000,000 years ago. Insects of this type, with long thin bodies and thin wings, were the most powerful that ever lived and masters of the air in their time, scientists agree.

They were among the swiftest of insects and because of their great strength could cover great distances in one flight. They lived off smaller insects, as no birds or mammals lived in that age.

More than 8,000 prehistoric insects have been found by Harvard expeditions in the same limestone beds in Kansas, where they are unusually well preserved.

The only other insect ever found approaching the size of this specimen was uncovered in northern France about 50 years ago.

"Go West, Young Man"

New Novel, Recently Published, Should Make Strong Appeal To Western Readers

There have been few good novels about the kind of Canadians who comprise seventy per cent. of the population—the farm and rural people and the mass of "shiriteles" city workers.

Such books as have been written have been mostly about farm life, although real farmers often have some difficulty in recognizing themselves. So rural readers will give a warm welcome to "Go West, Young Man," a new novel by Bernard J. Farmer, which Thomas Nelson & Sons of Toronto have just published. For it shows accurately, excitingly, and yet poignantly, the experiences of a young man, fresh from the Old Country, tossed into the whirlpool of "unskilled labour" on which Canada's impressive cities float.

Western readers will find it enlightening to get at first hand—embodied in a vividly written and exciting novel—the shift by which unskilled workers live. The hero of "Go West, Young Man" labours on railway section crews, sells silk stockings from door to door in Winnipeg, works on construction gangs in Manitoba, and mines in Northern Ontario. He often starves but never whines, is in and out of jail, and in the end achieves contentment in a modest job with a modest, contented wife beside him.

The fact that so many incidents come from the personal experience of the author adds immensely to the book's value.

Praise Belongs To Dogs

But Man Has Been Receiving Credit For Long Time

Just to show "it could be done," Rebe Leblanc rushed from Montreal to Winnipeg, a distance of 1,400 miles, in 30 days, with five dogs, not all trained huskies, there being only two of that breed, the others being a fox terrier, a collie and a Great Dane.

Mr. Leblanc has been receiving praise for the feat, and having done it we hope he will not attempt the journey back to show "it could be done." We do not see that he has added anything of value to human knowledge or accomplishment by his trip. No other human being is likely to travel between Montreal and Winnipeg that way. But if any praise is due we think it should go to the dogs. They had to do all the hauling, and when one considers that they had to average nearly 50 miles a day it is obvious they were subjected to terrific strain, especially when one of them was a fox terrier which would not be able to do much pulling.

Instead of praising Mr. Leblanc we would be inclined to prosecute him for cruelty to animals. Stratford Beacon Herald.

One rodent farm in Essex, England, has a normal "stock" of 500,000 rats and 350,000 mice, most of which will be sold for research work.

MISERABLE? WEAK?

NO need for girls or women to suffer from periodic pains, headache or dizziness. They find that Dr. Pierce's Favorite Prescription is a very beneficial tonic. This is what Mrs. Lillian Bates of 42 Myrtle Ave., Wallingford, Conn., said: "I felt so weak and rundown before I used Dr. Pierce's Favorite Prescription. I had to force myself to eat, and my stomach would not digest. I was so miserable that I could not do my work. After I used it I felt like a new woman. I am now strong and healthy. Buy of your druggist now. New size, 24¢ bottle. Write to Dr. Pierce's Clinic, Buffalo, N. Y., for free medical advice."

The moose can grow 78-inch antlers in three months. 2139

Explores Far North

Sergeant Of R.C.M.P. Is Made Fellow Royal Geographic Society

Sergeant H. W. Stalworthy of the Royal Canadian Mounted Police, now stationed at Regina, has been made a fellow of the Royal Geographic Society. It was learned at Ottawa.

Sgt. Stalworthy was attached to the Oxford University expedition which visited Ellesmere Land under E. A. Shackleton, son of the late Sir Edward Shackleton.

The signal honor conferred on the young officer was due to his general record.

Sergeant Stalworthy for three years was stationed at Bache peninsula, once the most northerly R.C.M.P. post, where he made ineffectual but heroic efforts to discover the fate of Dr. H. E. Kreuger, German scientist, thought to have perished in the vicinity of Axel Heiberg island.

Stalworthy is credited with having penetrated farther north than any member of the silent force. He returned from Bache peninsula in 1933, joined the Oxford Arctic expedition in 1934, and after returning with the expedition party to England, came to Canada last autumn.

Before going to the eastern Arctic he saw service in the Mackenzie district. During the Great War Sgt. Stalworthy was in France and Belgium with the R.N.W.M.P. squadron attached to Canadian corps.

Every Feature Embodied

Vancouver Boy Has Nearly Completed Model Railway System

An intricate model railway system is being completed by R. S. Robbins, young modelmaker, after more than a year's work.

It is called the "Happy Valley Railroad," and every feature of modern railway engineering is embodied.

Starting in a garage, the model has now grown so large an old gymnasium is used to house it. The set, 20 feet long and 12 wide, has more than a dozen trains which are electrically operated on several hundred feet of track.

More than 250,000 nails were used in laying the rails. Turntables, signals and switches are automatically operated. European and American trains, including the Royal Scot, Riviera express and a modern Canadian flyer are represented.

Roundhouse, airport, freight yards, bridges and scenery are complete. The young operator can stand at the switchboard and route all 12 trains without accident or collision.

Relief Costs

Donation Disbursements From 1930 To 1935 Are Tabled In House

Donation disbursements for unemployment relief and farm legislation from 1930 to 1935 totalled \$189,381,688, according to a return tabled in the House of Commons by Hon. Norman Rogers, minister of labor.

The disbursements were made under the following heads: Grants-in-aid to the provinces (August, 1934 to December, 1935), \$31,098,687; direct relief, \$61,211,621; provincial and municipal relief works, \$49,465,575; relief settlement, \$462,581; Saskatchewan relief commission, \$24,732,617; single homeless persons, \$3,398,708; expenditures of federal departments under relief legislation, \$27,274,226; other relief projects, \$3,069,776; administration, \$467,896.

Oldest British Peer

The oldest British peer, Lord Borwick of Hawkshead, died at Nice, France, at the age of 91. When Lord Borwick was a young man in Queen Victoria's service, he commanded one of the gun crews that fired the salute in honor of the late King George's birth. He was buried at Nice.

More Canned Fruit Imported

Imports of canned and preserved fruit into Canada in December were valued at \$101,663, almost double that of a year ago. The largest item was in pineapple from the Straits Settlements and Australia.

The man who watches the clock generally remains one of the hands.

India Rebuilding City

Quetta, Scene Of Disastrous Earthquake, To Be Restored

After the catastrophe earthquake in Quetta last year it was announced that the site of the city would be abandoned and the dead be allowed to find permanent graves in the ruins. Nearly thirty thousand persons were buried alive. Now the government of India has decided to rebuild Quetta at a cost of 30 million dollars.

The government probably is as much influenced by military considerations as by other factors. A garrison located at that point could defend India from western aggression and maintain order in the northwestern provinces. The city has the most feasible if not the only favorable site in the district for an aerodrome. Debris from the ruins could be used to fill in unhealthy, mosquito-breeding, low spots in the neighborhood.

The new city will be laid out by a town planning expert. Existing residential buildings will be built for all permanent government employees. Streets will be made wider and if the civil population returns they must expect a higher cost of living.—Toronto Star Weekly.

Restores Sight

Simple Injection In The Arm Proves Successful In Some Cases

A simple injection in the arm has proved successful in restoring the sight, at least in part, of persons blinded by trachoma or cornel opacity, the New York Academy of Medicine was told.

The new method, presented by four eye specialists who had been testing it for three months in New York eye clinics, consists of an injection into the muscles of the arm or other parts of the body of a simple chemical, benzyl chloramide ether, dissolved in olive oil.

The treatment was discovered by Dr. Jacob Jacobson, of Paris.

To Aid Night Driving

Reflector Buttons Said To Define Shoulder Of Road

Ever have trouble keeping an eye on the edge of the road when an approaching automobile throws its headlights into your eyes? You wouldn't it driving along the Berlin Turnpike alongside Mount Lamentation.

The Connecticut state highway department has granted permission for R. O. Smith, New Haven insurance agent, to test his idea. It consists of small metal posts, set 120 feet apart, each with ten reflector buttons which throw back the lights of an approaching car and clearly define the shoulder of the road.

The nest of the elder duck, lined with down from its breast, keeps the eggs as much as 28 degrees warmer than the surrounding air.

New York City contains more Irishmen than does Cork, Ireland.

Handsome Chair Set or Scarf Ends

PATTERN 5520

No matter what your period or style of furniture, a handsome chair set of flax crocheted is always in keeping—always easy to make, too, in this decorative peacock design set off by the K stitch and using just humble string. A beginner? You'll find the clearest directions imaginable with your pattern, which insures success from the very start. A buffet set or scarf ends may also be crocheted with this design.

In pattern 5520 you will find complete instructions and charts for making the flax set, an illustration of it and of all the stitches needed, material requirements.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Secure Rare Specimens

Asiatic Explorers Bring Collection Of Flora And Fauna From Tibet

Two Asiatic explorers are on route east with their collection of flora and fauna made in a recently completed two-year expedition into the one-time forbidden country of Tibet.

D. Dolan, explorer and research worker of the Philadelphia Academy of Natural Sciences, and E. L. C. Schaffer, scientist of the Berlin zoological gardens, left Vancouver for Chicago and Philadelphia. They were travelling via Calgary and Winnipeg.

Among the specimens they brought back are those of the wild yak and a full series of a large deer similar to the North American wapiti.

At present there is only one specimen of the yak, in Leningrad museum, and one of the deer species, in the British museum.

A Queer Wedding

Japanese Woman Vows To Marry Ashes Of Her Lover

To the strains of a funeral march Miss Masaka Sugisaki will be married in Tokyo, Japan, to the ashes of her lover, who died several months ago in America. Thirty years ago Yotschi Oya, her lover, left for the United States to make his fortune.

After waiting several years the girl went as a tutor to a Russian family in St. Petersburg, hoping to earn enough to take her to her sweet-heart. The revolution drove her back to Japan. Oya died in September and his body was cremated. The bronze urn containing his ashes has reached Miss Sugisaki, and she made a vow: "Though you are dead, I will be your wife to fulfill our pledge of 30 years ago."

Pamela: "Isn't Sport a naughty dog, mummy? He ate my doll's slipper."

Mother: "Yes, darling. He ought to be punished."

Pamela: "I did punish him. I went straight to the kennel and drank his milk."

Rocket Planes

An Aerial Weapon For Destroying The Enemy At Long Range

War is likely to bring rocket planes into being, Professor Alexander Klemin, aeronautical expert of New York University, told members of the Electrochemical Society in New York.

"There are possibilities," he said, "of constructing an aerial weapon for destroying the enemy at 200-mile range without risking the life of a single pilot."

First flying, he said, might be the use of rocket ships. "Still later," he said, "there may be a system of mail-carrying across the Atlantic. Later still we can conceive of passenger-carrying by the rocket."

"Since the rocket carries its own oxygen and works perfectly well in a vacuum, it should, if light enough, be capable of sufficient acceleration to rise outside the earth's gravitational field at very high speeds, and once launched it would continue to fly through space unimpeded."

Professor Klemin saw four practical problems ahead for rocket planes, fuel first. He said the rocket motor is not likely to be of the gunpowder variety. Jet propulsion is the objective. The jet fuel would issue from a nozzle at speeds of nearly a mile a second.

The rocket ship, he explained, is efficient only when its own speed is nearly that of the fuel jet. This brings up the second problem, inefficiency at low speeds.

The third problem is that a rocket flying a couple of thousand miles an hour needs little wing area, but the opposite when landing or taking off.

Fourth is a materials, especially for the exhaust nozzle of the motor, which is not only subjected to very high temperatures but to terrific erosion by fast moving gases.

A Remarkable Machine

Photo-Electrical Has Been Invented By Russian Engineer

A new photo-electrical which can work to a complicated design without human aid has been invented by a Russian engineer, V. S. Vichman, who works at the Moscow Institute of Machine Tools and Instruments.

With the aid of a photo-electric cell the lathe can "see" any drawings that are placed in it. Then, it is claimed, the shaping instruments are automatically adjusted.

Vichman's lathe has been adopted by the institute, which is now manufacturing others of similar design for use in industry.

To Soften Hard Water

When it is desired to soften well water or spring water for household purposes this can usually be done with washing soda, or soap substitutes. When this is not satisfactory there is a chemical preparation in crystal form that can be obtained from your druggist. Water so treated is not, of course, to be used for drinking or cooking purposes.

In the office women do what men want done. In the home men do what women want done.

If you are run down you may wind up in the hospital.

Used For Centuries
Ethiopian Natives Find Carcade Plant Good Substitute For Tea

Italy is developing at Om Ager, Entref, an ibiscus plant called "carcade" to take the place of tea. At Helaghim 500 acres have been planted. Carcade has been used by the natives for centuries for tea-making. The plant produces red flowers which before they mature, are picked and dried. The dry petals are steeped and the brew is almost indistinguishable from real tea. The plant has the additional advantage of being a source of marmalade. The leaves are ground up and boiled for this purpose.

Guest: "Only once in history has the personality of a great singer inspired a great chef in the naming of a masterpiece—when we got the peche Melba."

Flapper: "Oh, but I'm sure you're wrong there. What about the oyster Patti?"

Prospective Tenant: "I like this room, but the view from the window is rather monotonous."

Landlord: "Well, of course, this is just a rooming house; it isn't a sight-seeing bus."

FLEMING'S FOLLY

—BY—
LAWRENCE A. KEATINGE

SYNOPSIS

The story opens with Link Fleming addressing a meeting of Boone County cattlemen, called together with the object of forming an irrigation company.

Roper Kilgo, the boss of the Rawhide and nearby ranges, who seemed to approve the plan, but was really opposed to it, had agreed to back Torney, a derelict mining engineer, whom Kilgo knew would be called upon to give his expert opinion in favor of the scheme, to reverse his earlier endorsement, and declare that irrigation in Boone county was only a new-fangled way to waste money.

The meeting terminates, but Buzz Hamilton and his sister, Helen, Link and Kilgo stay behind and Helen asks Fleming questions about his irrigation plan. This angers Buzz who accuses Fleming of trying to influence his sister and, as he asserts, ruin his "spread". Buzz shouts at Fleming in an uncontrollable fit of anger, but Buster Townsend, Link's foreman, is shot in the stomach and Fleming is unharmed. Buzz is arrested and sentenced to three years' imprisonment.

Helen and Fleming form a partnership to provide irrigation for their own properties.

Fleming goes home and studies the plans drawn by Torney to learn whether they could be adapted to a smaller scheme suitable for his and Helen's land, and is satisfied it could be done. Feeling cold, he lights the fire and there is an explosion that wrecks the house, burns it and the plans and renders Link unconscious. He is rescued from the blaze by an employee.

(Now Go On With The Story)

CHAPTER VII.—Continued

He avoided her glowing eyes. "I don't know if we could raise the money. And suppose somebody hurt you? I'd never forgive myself!"

The visitor cleared his throat. But she turned on him, drawing herself to full height. "Mr. Berrens, your offer is not acceptable because Link—Mr. Fleming—has already agreed to build the dam. He has made a contract."

"A contract?"
She eyed Berrens a moment, then slowly turned back to Link. "You gave your word. Isn't that as good as anything written?"

"Buy it in," he said.
"Your word to join me in building the dam. What if we do have to wait till spring?" she burst out. "You and I talked about this in letters before I came home. We determined to build a dam to prove irrigation will work. Well, you and I became partners. And I won't let you draw out of that, or sell to some company that will do the very thing you want to do to Silver Creek. No sir!" Helen cried, and stamped a small foot to the floor until her eyes flashed like the clink of silver in a bag. "We're partners, and partners we stay!"

He raised himself on his elbow. Berrens started to say something but Link's sharp gaze stopped him. There was a new, strange light in his eyes that had not been there before. Despite the shining grease that covered his face, and the total lack of eyelashes or eyebrows, more lasting, dawning in his look.

"Say! I'd sure like to be partners with you a long time after we build—"

His words were drowned in a crash. Dismounted, and yanking down to view the bunkhouse window that had been shattered by G. I. Verrens' hurtling body. At sound of running steps that entered the bunkhouse, and a stentorian voice that boomed at them, they swung back startled.

"Link!" bawled Sheriff Ames. Stephen as he posed, siskin in hand. "I'm after the gent that bought dynamite at Sam Pickett's store yesterday. Yeah, an' a Winchester and slug too. Got teeth in his face; short, wears a coat like a horse blanket. I bet he's the hombre shot Torney and mebbe salted yore stove! Where'd he go?"

Seconds ticked away before they comprehended. Fleming crawled painfully out of his bunk to stand away dizzily. "The window, Sheriff! And—gosh, get him! I'm depending on you, Ames! Get the lobo, 'cause we sure don't want him loose when we build that dam!"

CHAPTER VIII.

Three men who leaned idly against the sheetrock front of Sam Pickett's general store in Rawhide exchanged significant, knowing looks. By common consent they returned their eyes roadward to watch two riders whose mounts trudged with lowered heads through the furry dust of Main Street.

One lank, stubble-chinned hawker furnished for a match to relieve the pipe. "Firm o' Hamilton & Fleming's come to town, boys."

A companion shifted his chew and spat into the street. "Can't be they're lak'in' money again?" he questioned sarcastically. "Link started out like he'd cornered all the dough in the state. Anyhow, he must've figgered he had enough to throw away a fortune on the engineer's marvel o' the Goldarn West!"

"They chuckled at this wit, their derision carrying plainly to the

square shouldered rider. Annoyed as much as anything, couldn't it? To have Buzz free, so he wouldn't have to serve the rest of his three years.

As boots sounded closer along the hollow sidewalk Link turned, his expression changing slight displeasure. He nodded to Kilgo, whose round mottled face wore a grin ponderously genial.

"Spendin' yore dough before yuh got it, Helen?" He chuckled with tolerant comprehension of feminine vanities. "Wal, don't order a truck-load o' jewelry unless yuh charge it to somebody that don't throw away good hard cash backin' Silver Creek into a lake. 'Course," Roper winked, pausing with feed wide apart and thumbs hooked in the carcase, "I ain't sayin' I wouldn't be glad to foot the bill, at that."

"I wouldn't think of such a thing," she assured quickly.

He paused with an ironic look at Link. "How's the big dream progressin'? Or are yuh findin' out it's a nightmare?"

"Fine, thanks," Fleming rolled a cigarette and gazed with patent boredom down the street. "Helen, will you excuse me a minute? I want to speak to the sheriff."

She nodded. The owner of the Box 50 Ranch watched him stride away, then chuckled. "Toughy about the car can't he? But he'll be tougher when his hull cow-faces goes up in smoke, an' there's a stack o' bills a foot high startin' him in the face!"

"Link won't be alone in trouble," she reminded with quiet dignity.

"That's what I don't like," she said. "That's what I don't like. His heavy-lidded eyes noted the grace of her lithe figure. "Shore would hate to see yore spread busted, Helen. Looks to me like this is a scurvy trick to sock yuh half the cost of the dam."

The pressure of her cherry lips showed the girl trying to stifle impatience. "Why talk about it?" she asked wearily. "We've been over this a dozen times. It all comes down to whether one believes in irrigation. You don't, but I do."

"Yeah, but it kind of rubs me the wrong way. I mean, you don't have so much time for me any more. And you and I used to be—"

"Pleasure, honey!" he replied. "I'm pretty fond of yuh. Always was. Guess you kind of like me too, eh?"

She saw Link and Sheriff Ames Stephen in earnest conversation, and seeking escape, turned on her heel. "That reminds me, I must get a few things at Pickett's store."

(To Be Continued)

Sanctions Help Venice
Have Resulted In Keeping Motor Craft Off Canals

For more than twenty years lovers of Venice, both Italian and foreign, have lamented the advent and increase of motor craft upon her famed canals, not only on account of the horrible smells they spread all over the city but also because they have gone far to destroy her traditional serenity and romantic peace. Now along come sanctions, imposed by the League of Nations, which undoubtedly are pinching Italy considerably so far as her water plans are concerned, but which are hailed by the Venetians as something little short of a godsend, since a direct result has been that the motor craft have been banned and the gondolas have come once more into its own—Montreal Star.

Scotland's new national park will cover 100 square miles.

Impressed Royal Visitors

Burden In Earnest

The following is from a London letter by Frederick T. Birchall, in the New York Times:

Some 500 years ago a King of England who had been a lively-lad as Prince of Wales had sent purses of gold to his boon companions on his succeeding to the throne as Henry V. along with a message that their joyful companionship had come to an end. And it did end. This Henry was a King who later achieved great glory. It was he who fought and won at Agincourt.

There is a legend—nobody should try to confirm royal legends, which might not be considered wholly respectable—that Edward VII., who had also spent a lively youth, took similar action on his accession.

Whether the eighth Edward, who has enjoyed life in many climes before being summoned to the responsibilities of the monarchy, will imitate these legendary examples by marking his determination to devote himself solely to the responsibilities of rulership by some special manifestation must be left to history to determine. It is improbable that any contemporary record will show it.

But that the new King has taken the heavy burden that now falls upon him with the grim earnestness that his assumption must entail there is plenty of evidence. No one who saw at close range the funeral ceremonies in which King Edward participated could fail to be impressed with the fact that in his face deep grief struggled with a set will to play his part as he went through his office as public. He has impressed his royal visitors in equal degree.

The Italian Crown Prince, who dined at Buckingham Palace informally with the King and Queen Mary when the funeral formalities for King George were over, told a friend afterward that what impressed him most about both the Queen and her son had been how they had subordinated their sorrow to an iron resolution to forego no part of their public duty.

"The discipline," said Prince Humbert, to his British friend, "they're wonderful, your people."

Testing Its Fallibility
U.S. Trying Out Formula To Predict Weather In Advance

The United States Navy is trying out a new weapon in the weather department. A confidential government source disclosed that it had obtained an option on a mathematical formula by which it hopes to be able to plot fleet manoeuvres and even long campaigns in full knowledge of how nature will behave.

War movements could be planned far in advance and carried out under cover of ugly weather, or could be halted at strategic points in accordance with the weather conditions, if the formula proves accurate.

Exhaustive tests of its fallibility have been carried on for almost two years, the government source said, and thus far the "most conservative" statement of its accuracy is "95 per cent."

So that it could "keep a finger on him," the Navy Department gave the discoverer of the formula, Professor Selby Maxwell, who predicts weather two years in advance by the movement of the moon, a desk in its hydrographic office in the United States Courthouse in Chicago.

Offered In New Form
Cod liver oil, long a potent defence against disease, was offered to medical men in a new form, a paste which heals wounds on the body's surface. The contribution came from two Soviet physicians, Dr. V. I. Lost and Dr. I. G. Kogerichin, of Gorkin, Russia.

One Or The Other
Either the pedestrians are stepping more lively or the motorists are more careful in England where persons injured on roads number 1,200 less last year as compared with 1934.

Music is being introduced into factories in England, experts declaring that rhythm in manual work increases the output.

RHEUMATISM DRIVEN OUT!
It should be realized Rheumatism is not invulnerable if the poisonous acid in a new form, a paste which heals wounds on the body's surface. The contribution came from two Soviet physicians, Dr. V. I. Lost and Dr. I. G. Kogerichin, of Gorkin, Russia.

The solvent stimulating action of Phosfocine has a uniquely effective in breaking, dispersing and expelling the harmful acid crystals and it releases the tortured and exhausted nerve centers with the energy to react to movement, and supplemen to joint function.

This exclusive property of Phosfocine is illustrated by the recent experience of Mrs. E. Brewster, who was in terrible pain with Rheumatism in her feet, walking with agony. She took Phosfocine and in a few days all her Rheumatic pain has gone without any pain. 6 Creek Street, Montreal.

The speedy expulsion of Rheumatism is something to be thankful for. It is a new form, a paste which heals wounds on the body's surface. The contribution came from two Soviet physicians, Dr. V. I. Lost and Dr. I. G. Kogerichin, of Gorkin, Russia.

Work Nearly Completed

Canadian Memorial On Vimy Ridge To Be Unveiled July 24

After 12 years in London and France, with visits to Italy and Dalmatia, Walter S. Alward, the Toronto sculptor, has nearly completed the Canadian war memorial on Vimy Ridge, which is to be ready for unveiling July 24.

The London correspondent of the Guardian writes:

"The memorial is in the form of a great stone platform, with two pylons rising to 140 feet the length of the base being about 240 feet. There are 20 heroic figures in the composition. On the walls of the memorial are inscribed the names of 13,500 missing Canadian soldiers. The stone is Dalmatian limestone from a quarry used in the third century for the palace of Diocletian in Spalato. Some 70,000 cubic feet of this stone were required."

Twelve years since Mr. Alward came over to London to direct the construction of the memorial, and the delay in carrying it out has been largely due to difficulties in the delivery of the stone.

Mr. Alward's London studio is that low romantic building built for Alfred Gilbert in the 80's. You enter from Malda Vale, at a part where tall, smart flats have risen opposite and on both sides of the house since Mr. Alward and his family took up their residence there. The studio room is a long barrel-vaulted apartment where Gilbert held his Bohemian parties and where the Alwards have welcomed Canadian visitors and most of the eminent English sculptors and architects of our time. It will be a wrench for them to leave London when the work is over, for few overseas residents at Manchester have acquired so many friends.

There will, however, be compensations when he returns to Canada. He has endured many London fogs and much darkness through the day, and on occasion he has had to work by torchlight through failure of light equipment. His admiration is unbounded for London sculptors, who have to work in so much darkness and discomfort on an outdoor statue that takes the grime of London so quickly and never looks as the sculptor intended after the first six months, he is in marble. He has a real love for London. He even admits that some day he may return."

Have Strange Ideas
Natives Of New Guinea Think Shovel Heads

Details of the strange life of the primitive natives of the Upper Ramu, New Guinea, who buy their wives for the equivalent of one shilling and shoot themselves with bows and arrows when they get a headache, have been told at Sydney, New South Wales, by a missionary, S. N. Gander.

The natives have small bows and arrows, and when one of them gets a headache he fires arrows at his forehead until blood appears. They claim that this is a certain method of relief.

Shells are used as currency. One shell is worth about a shilling but it is usually at a great distance, and there is more noise than danger.

Wound Protect Animals
The Ottawa Humane Society, endorsing a like request of the British Columbia society for the prevention of cruelty to animals, decided to write the minister of justice to amend the protection of animals act 1911, to make it possible to deny a dog license to any person found guilty of cruelty to dogs.

Tailors of Spain have drawn up a "black list" of slow payers.

Mickey Mouse toy sales in Britain will total \$10,000,000 for 1935.

Little Helps For This Week

The cup which my Father has given me, shall I not drink it? John 15:11.

Every sorrow every smart,
That the Eternal Father's heart Hath appointed me of yore,
Or hath yet for me in store,
As my life flows on, I'll take Calmly, gladly, for His sake.

The very least and the very great sorrows that God suffers to befall thee proceed from the depths of His unspokeable love; and such great love were better for thee than the highest and best gifts He has given thee, or could ever give thee, if thou couldst but see it in this light. So if you are cold, if you are hungry or thirsty, or if others vex you by their words or deeds, or whatever happens to you that causes you distress or pain, it will all help to fit you for a nobler life.

Prerogative Of Man
No Other Living Thing Has The Power To Smile

A smile! Nothing on earth can smile, but the face of man. Gems may flash reflected light, but what is a diamond flash compared with an eye-flash and a mind-flash? Flowers cannot smile. This is a charm which even they cannot attain. Birds cannot smile; nor can any living thing. It is the prerogative of man. It is the color which love wears, and cheerfulness, and joy—these three. It is the light in the window of the face by which the heart signifies to other, husband or friend, that it is at home and waiting. Laughter is, and sobriety is night, and a smile is the twilight that hovers gently between both, and is more bewitching than either.

Science Is Baffled
Chicago Woman Enters Fifth Year Of Heavy Sleep

On St. Valentine's day of 1932, Patricia Maguire, 28-year-old stenographer, returned from mailing a valentine to her small niece and complained of being drowsy. Next day she fell into a coma.

St. Valentine's day of 1936 found her still sleeping. She has started the fifth year of the heavy slumber no scientific treatment has been able to conquer.

Should Patricia awake she would find herself 32 years old, with no recollection, doctors said, of any lapse in her life. The malady which holds her locked in restless sleep brings no pain, they said.

There are about 500 telephones in Ethiopia, not counting inter-government instruments.

Canadian Hosiery Favored in Britain

LONDON, Eng. — Milady in Britain, when she goes out to buy her pure silk hosiery, looks with favor on the Canadian article, which has made a name for itself in the British market on the grounds of quality and elasticity. Of some 150,000 dozen pairs of silk stockings which it is estimated were imported into Great Britain last year, Canada supplied well on to half that quantity, according to the Industrial Department of the Canadian National Rail-

The World of FACTS - FICTION

By BROWDER

NELLIE MCCLUNG'S "Clearing in the West" continues its popularity—and it is well deserved, for here is a very human story of pioneer days in Ontario (to which Mrs. McClung's ancestors migrated from the Old Country) and of her life in the West. A splendid book, this, though I found it rather poorly punctuated, which may have been the fault of the publisher.

Edmund E. Pugsley, a conductor for the British Columbia Electric Railway is author of "The Big Hill," a short story based on the history of the building of the Canadian Pacific Railway, which appears in the current issue of "Railroad Stories" magazine. Pugsley's railroad career began in 1905 with an expedition that surveyed the Midway and Vernon Railway in British Columbia.

Some months ago I attended a lecture given by a member of the Edmonton Dickens Fellowship, in a small community hall there. It was a fine reading from the works of that master of literature—Charles Dickens—yet only 20 attended. Had the lecture been given in the Macdonald Hotel, methinks it would have drawn a larger crowd, for the reading public is still as fickle as in Dickens' time and craves a sophisticated atmosphere.

Arthur Chapman, a well-known Eastern American newspaperman, recently passed away. Although I cannot recall any of his other works, "Out Where the Wind Begins" was a very worthy effort. I have a copy of it (on a penny postcard) which I bought in Seattle. The poem adorned the walls of countless homes.

Canada's four fighting vessels, the destroyers Skeena, Vancouver, Champlain and Saguenay, will soon be in Western Indian waters, on their way to manoeuvres with British naval boats. Trim men of war, they make a better appearance than the old H.M.S. Rainbow and H.M.S. Niobe, which, with a few smaller craft, made up Canada's "navy" during the Great War.

Absolutely though it was, the mere presence of the Rainbow on the British Columbia coast during those stirring days was a great comfort to the people of that province, who realized of the havoc wrought by the German cruiser Emden further out in the Pacific.

Commanded mainly first by former British naval officers, the Rainbow turned out many fine sailors—real deep water men who were a credit to the officers of that fighting ship. Following the war, the Rainbow was scrapped and sold for junk, and the last time I heard of it, the old ship, only the hull left, was being used as a barge to carry ore from Anxoy to the Tacoma smelter.

ways. Full-fashioned silk hosiery is where the Canadian stocking makes its appeal, while the decorated heel, the swag toe, a fancy top, shading color and all the other gadgets and adornments which are dear to the milady's heart are added attractions and bring higher prices and larger sales as long as the feature is new.

"The only thing that can and will drive war from the earth is the demand of public opinion,"—Carrie Chapman Catt.

Quips and Quirks

"How did your friend get his reputation as a leader?"
"Well," replied Senator Sorghum, "he has perfected a sort of optical illusion. He travels in a circle so fast that to the casual observer he looks like a whole procession."

An Oriental shopkeeper, being in great financial trouble, went to a specialist in burglary and arson.
"Would you like to have a fire?" he was asked.
"No," he replied, "I prefer a burglary." In the first place it is cleaner. In the second, if the insurance company won't pay, you've still got your goods."

"Now," said the school teacher, "give me a definition of space."
Junior stood up flustered and red.
"Space," he began, "is where there is nothing. I can't explain it exactly, but I have it in my head all right."

A man drowning by the fire was rescued by the sound of his pal rummaging in the cupboard.
"What are you looking for?" he asked.
"Nothing."

"You'll not find it there," he said, and he settled down in his chair again. "You'll find it in the de-canter on the table where the whiskey was."

"Have you any complaints to make?" asked the prison governor.
"Yes," replied the prisoner, "the prison walls are not built to scale."

NEW DEVICE WARNS RECKLESS DRIVERS
Among the reported new inventions is one called the Oral Speedometer, which operates with a phonograph attachment. It has the following to say as the driver's speed increases:
At 35 m.p.h.—"Too fast for city driving. We hope you're in the country."
At 45 m.p.h.—"Your car is still under control, but watch the car behind the car ahead of you. Have you had your brakes tested recently?"
At 50 m.p.h.—"Your responsibility is increasing. Keep your eyes on the road."
At 60 m.p.h.—"Are your insurance premiums paid to date?"
At 70 m.p.h.—"You drive. This attachment will do the praying."
At 80 m.p.h.—"Someone will probably have this car repaired. If so, we thank you for the sale of a new speedometer to replace this one which in a few moments is going to hell along with you."

DISABLED STILL A PROBLEM
Canada has by no means yet completely solved the problem of the veteran incapacitated because of injuries or illness resulting from war services. Files of the Army and Navy Veterans—in Canada, maintained at Dominion headquarters, still carry more than 8000 cases in which applications to the Pensions Commission or appeals, are pending.

Summer Cruises To Alaska and British Columbia

An extensive program of summer cruises to Alaska and British Columbia by Canadian National Steamships is announced for the coming season. There will be weekly sailings commencing June 15 by the S.S. Prince Rupert and the S.S. Prince George, which will provide for a variety of five-day and nine-day voyages through sheltered waters to British Columbia and Alaska ports.

On more ambitious scale are four special cruises which will be undertaken by the S.S. Prince Robert, each of which will require 11 days after sailing from Vancouver.

The itinerary of the Prince Robert will include Gardner Canal, fjord of the hanging valleys; Sitka, one-time capital of Russian Alaska, and the Taku Glacier, a boundless ice field, mother of a hundred glaciers. The Prince Robert was especially

designed for cruise traffic in British Columbia and Alaska waters and possesses spacious accommodation, large deck and recreation area, incorporating all the comforts of an ocean liner with individual conveniences of unusual character.

Wife at Southend: "My husband, after pushing me out of the house, put up a notice in the front window. 'Trespassers will be prosecuted.'"
